WORLD PREMIERE
OF EV0m

Introducing EVOm - next generation roll cover

At Mountain Top, innovation is not a term we use lightly. But with a host of radically different design and functionality solutions, as well as a number of patents to its name, the new EVOm roll cover is a true example of innovation at its best: Completely redesigned interlocking aluminium slats for maximum security, a new drainage system and canister design, and easy access to the built-in accessory tracks are some examples of what makes EVOm the obvious choice for style and quality conscious pickup truck owners.

It stands out – because it fits in

The new EVOm roll cover raises the bar in design, functionality and quality. It is not just a roll cover. As always, details count – they show that eye for quality. The sleek look of Mountain Top EVOm stands out, boosting the appearance of modern pickups with its clean and sporty styling.

Infinity design

Design and functionality in one. The EVOm cover is designed with no back edge. Besides the elegant and sleek appearance, the infinity design prevents water from building up on the cover by letting the water flow over the rear profile or evacuate through the side rails.

Optimal security

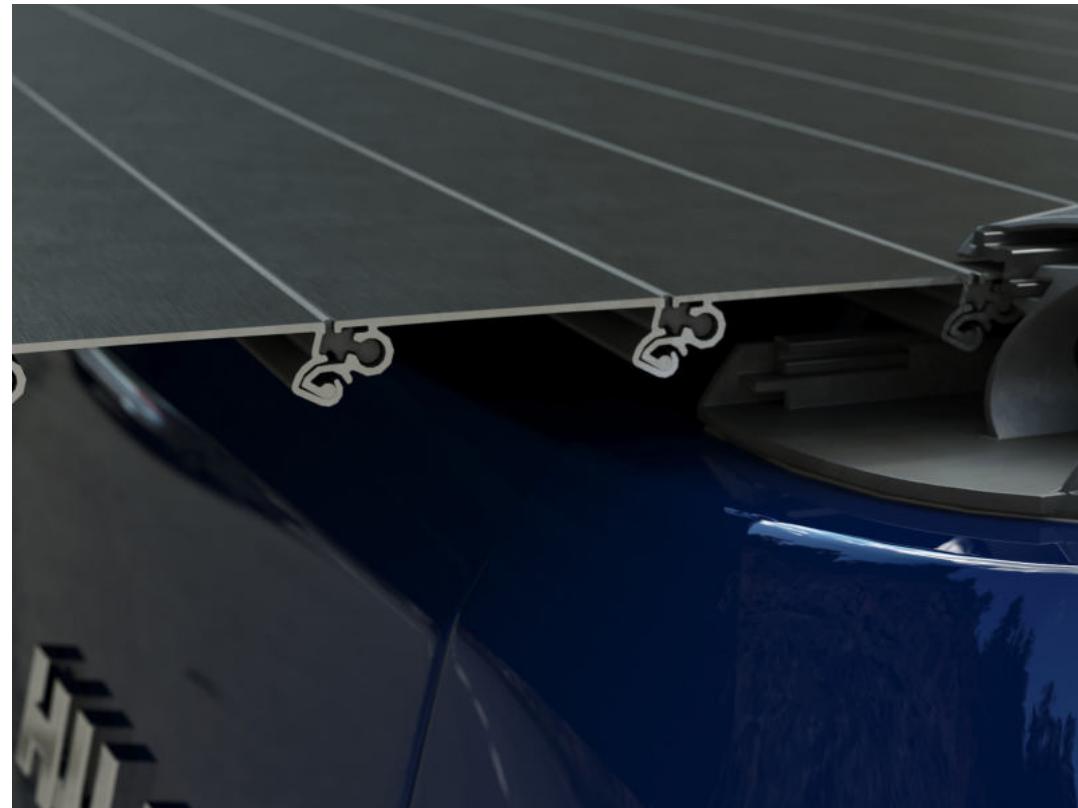

Security is one of the main reasons for choosing an all-aluminium quality product to protect the cargo area of a pickup truck. EVOm harnesses Mountain Top's many years of experience with the development of secure truck bed cover solutions and introduces a new approach to the design and operation of a roll-cover offering a number of advantages.

No external handle

The handle of the EVOm has been placed on the underside of the rear profile. This enables the elegant 'Infinity' design but also removes the need for an external handle and locking which makes the cover a less obvious target for uninvited and forced openings.

Knife-proof, interlocking aluminium slats

The cover can only be opened once the tailgate has been unlocked and opened. The unique hinge design, with interlocking aluminium slats is knife-proof and impossible to force apart.

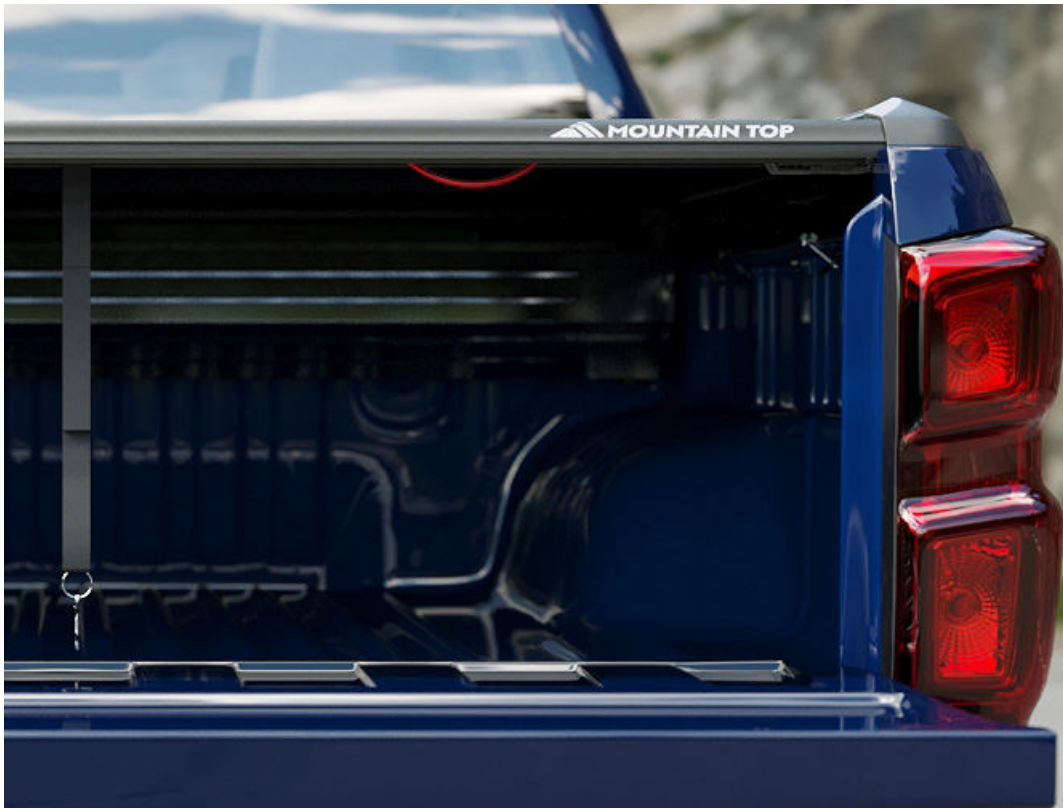

How to operate EV0m

Release the cover by pulling the release strap on the left or right side of the vehicle.

Push the cover to the open position you want. The cover is only locked in the fully open or fully closed position and will remain in any intermediary position hence removing the need to engage the release straps to open it further or close it again.

In the fully open position, the locks will engage making it safe to drive with the cover open.

Quality you can trust

Made from strong and lightweight aluminium with an approved automotive grade powder coat finish, EV0m is designed and manufactured with the aim of providing a robust and durable cover that will look good and work well for many years.

Daily use in all conditions

EV0m combines design and quality to stand up to the world's toughest environments. It increases the practicality of the cargo area without limiting its versatility. With a high level of protection from the elements, belongings are kept safe and dry inside the truck bed.

ENGINEERED FOR ADVENTURE

 MOUNTAIN TOP[®]

Built-in accessory tracks & ClickTech

The side rails have built-in accessory tracks offering a fast, easy, and secure installation of Mountain Top and other aftermarket accessories. Access to the accessory tracks is made easy by the ClickTech system. Just click and pull to remove the corner caps.

Easy Maintenance

The ClickTech system also allows for easy access to the drainage channels in the side rails as well as the canister for removal of dirt and debris.

Simple and fast installation

We want to make life easier and simpler for our customers and end-users. For the EVOm, we have developed a unique clamping system which is simple, strong, and fast allowing a fitter to perform the installation in less than one hour.

Remove the entire cover

The unique design of the EVOm and its ClickTech system, allows for the moving part of the cover to be removed in just a couple of minutes to enable easy maintenance and repair in different situations.

If one or more lamellas are damaged or scratched, simply remove the corner caps and pull out the cover to replace the impacted parts.

Weather resistant

Bring it on! Designed in Denmark and tested in Australia, we can say with confidence that EVOm is made for extreme conditions. Whether the roll cover is used in the snow and ice of a mountain range skiing or pushing your 4x4 skills to the limit, or in the blistering UV rays of the dusty outback, EVOm will continue to open and close, just the same as the day it was installed.

And rain? Let it pour!

Clever Water Management

The EVOm drainage system takes water management to a new level, and will keep the truck bed dry even during monsoon-like downpours. Through a unique 6-point water management system, the EVOm drains up to 40 litres per minute.

The 6-point drainage system combines four drain funnels in the side rails (sitting above the truck bed level) with two large canister drain tubes to provide this high capacity.

Why choose EV0m?

- Designed to match the lines of modern vehicles
- All-aluminium with OE-grade powder coat finish
- Fast installation
- Optimized for easy maintenance and repair
- Built-in accessory tracks
- Interlocking knife-proof aluminium slats
- No external handle for optimized design and security
- Made to withstand all weather conditions
- Unique 6-point water management system
